

Seeding QDArchive - Part 2: Classification

Student: A K M Yasar - Matriculation ID: 23025328

Applied Software Engineering Project, FAU Erlangen-Nurnberg

Prof. Dirk Riehle, Professorship for Open-Source Software

Scope

- Repositories: 2
- Projects: 387
- Files: 11979

Project types (Part 2 Step 1)

- QDA_PROJECT: 0
- QD_PROJECT: 355
- OTHER_PROJECT: 31
- NOT_A_PROJECT: 1

Classification (Part 2 Steps 2 and 3)

- Taxonomy: ISIC Rev. 5, classified two levels down, i.e. to division level.
- Classifier: a rule-based ISIC lexicon scored over a TF-IDF weighting of the project metadata and of the text extracted from the downloaded files. It is deterministic, so re-running it reproduces this report exactly.
- ISIC classifies economic activities, so a project is assigned the division of the activity its data is about, not the activity of doing research; otherwise every project here would collapse into division 72 (Scientific research and development) and the taxonomy would carry no information.

1. Repository: harvard-murray-archive

URL: <https://www.murray.harvard.edu>

Project types found

- QD_PROJECT: 355 (92.0% of 386)
- OTHER_PROJECT: 31 (8.0% of 386)

Dominant class

- Q.85 Education with 189 projects (53.7% of the 352 classified).
- Runners-up: 86 Human health activities (78); 84 Public administration and defence; compulsory social security (40); 88 Social work activities without accommodation (10)

Coverage

- 352 of 355 in-scope projects (QDA_PROJECT + QD_PROJECT) received a class.
- 2258 of 11978 files could be downloaded; 1631 yielded machine-readable text for the classifier to read.

Comments on the findings

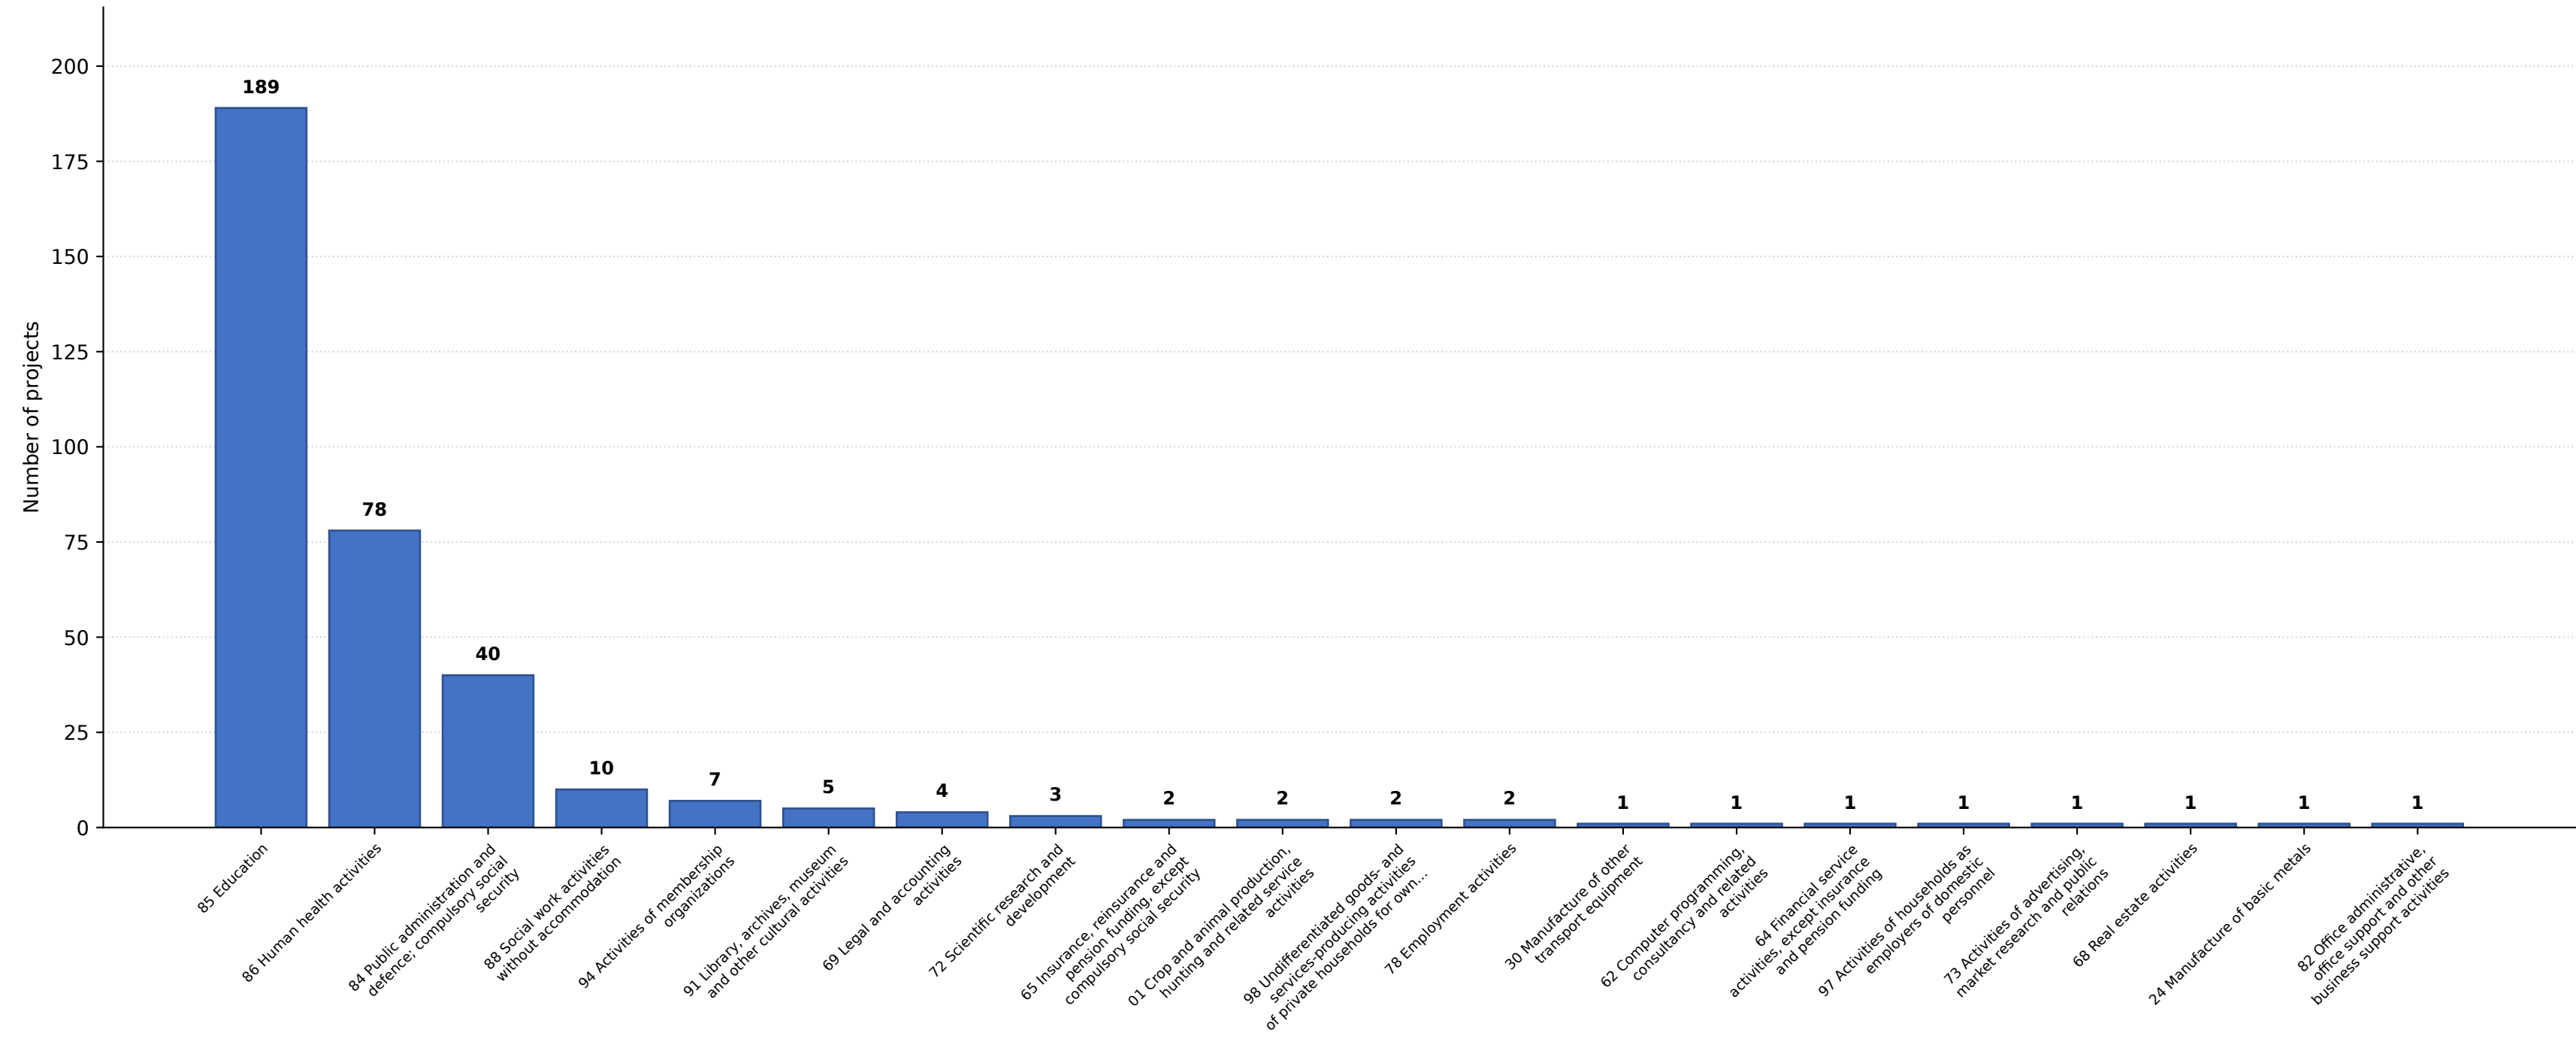

- No file in this repository carries a QDA file extension (.qdpj, .nvp, .atproj, .mx*, ...), so by the Step 1 rule no project can be a QDA_PROJECT. The archive predates the REFI-QDA standard and stores its analysis material as PDF codebooks and SPSS/SAS data rather than as QDA software projects. This is a property of the data, not a gap in the pipeline: the classifier does look for those extensions.
- The primary data is dominated by .pdf (9344), .txt (244), .doc (149). Because a single PDF is enough to make a project a QD_PROJECT, that rule sorts almost the whole repository into one bucket; the file-type rules discriminate far less here than the class taxonomy does.
- 9720 of 11978 files (81%) are restricted and could not be downloaded, so for those the classifier reads only the metadata and the file name. Classification quality is therefore not uniform across the repository, and the projects

whose files are open are classified on more evidence than the rest.

- The distribution is heavily concentrated: 87% of the classified projects fall into just three divisions, and 20 of the 87 ISIC divisions occur at all. This mirrors the collection policy of the archive rather than a limitation of the taxonomy - it is a themed archive of social-science studies, so the manufacturing, mining and transport divisions are simply absent.
- 'Education' dominating is consistent with the corpus: the studies follow school and college populations over time, so schooling vocabulary is what the researchers themselves wrote in the metadata.
- ISIC classifies economic activities, and much of this archive is about family life, personal identity and the life course, which no ISIC division describes directly. Such projects land on the division of the institution they were studied through (a study of mothers observed via their children's schools scores as Education), so the classes should be read as 'the sector this data speaks about', not as a summary of the research question.
- 3 in-scope project(s) matched no lexicon term and were deliberately left unclassified rather than forced into a division, following the instruction to leave a field empty when it cannot be filled.

1. Repository: harvard-murray-archive - histogram of primary classes

All classified projects (QDA_PROJECT + QD_PROJECT), ISIC Rev. 5 divisions

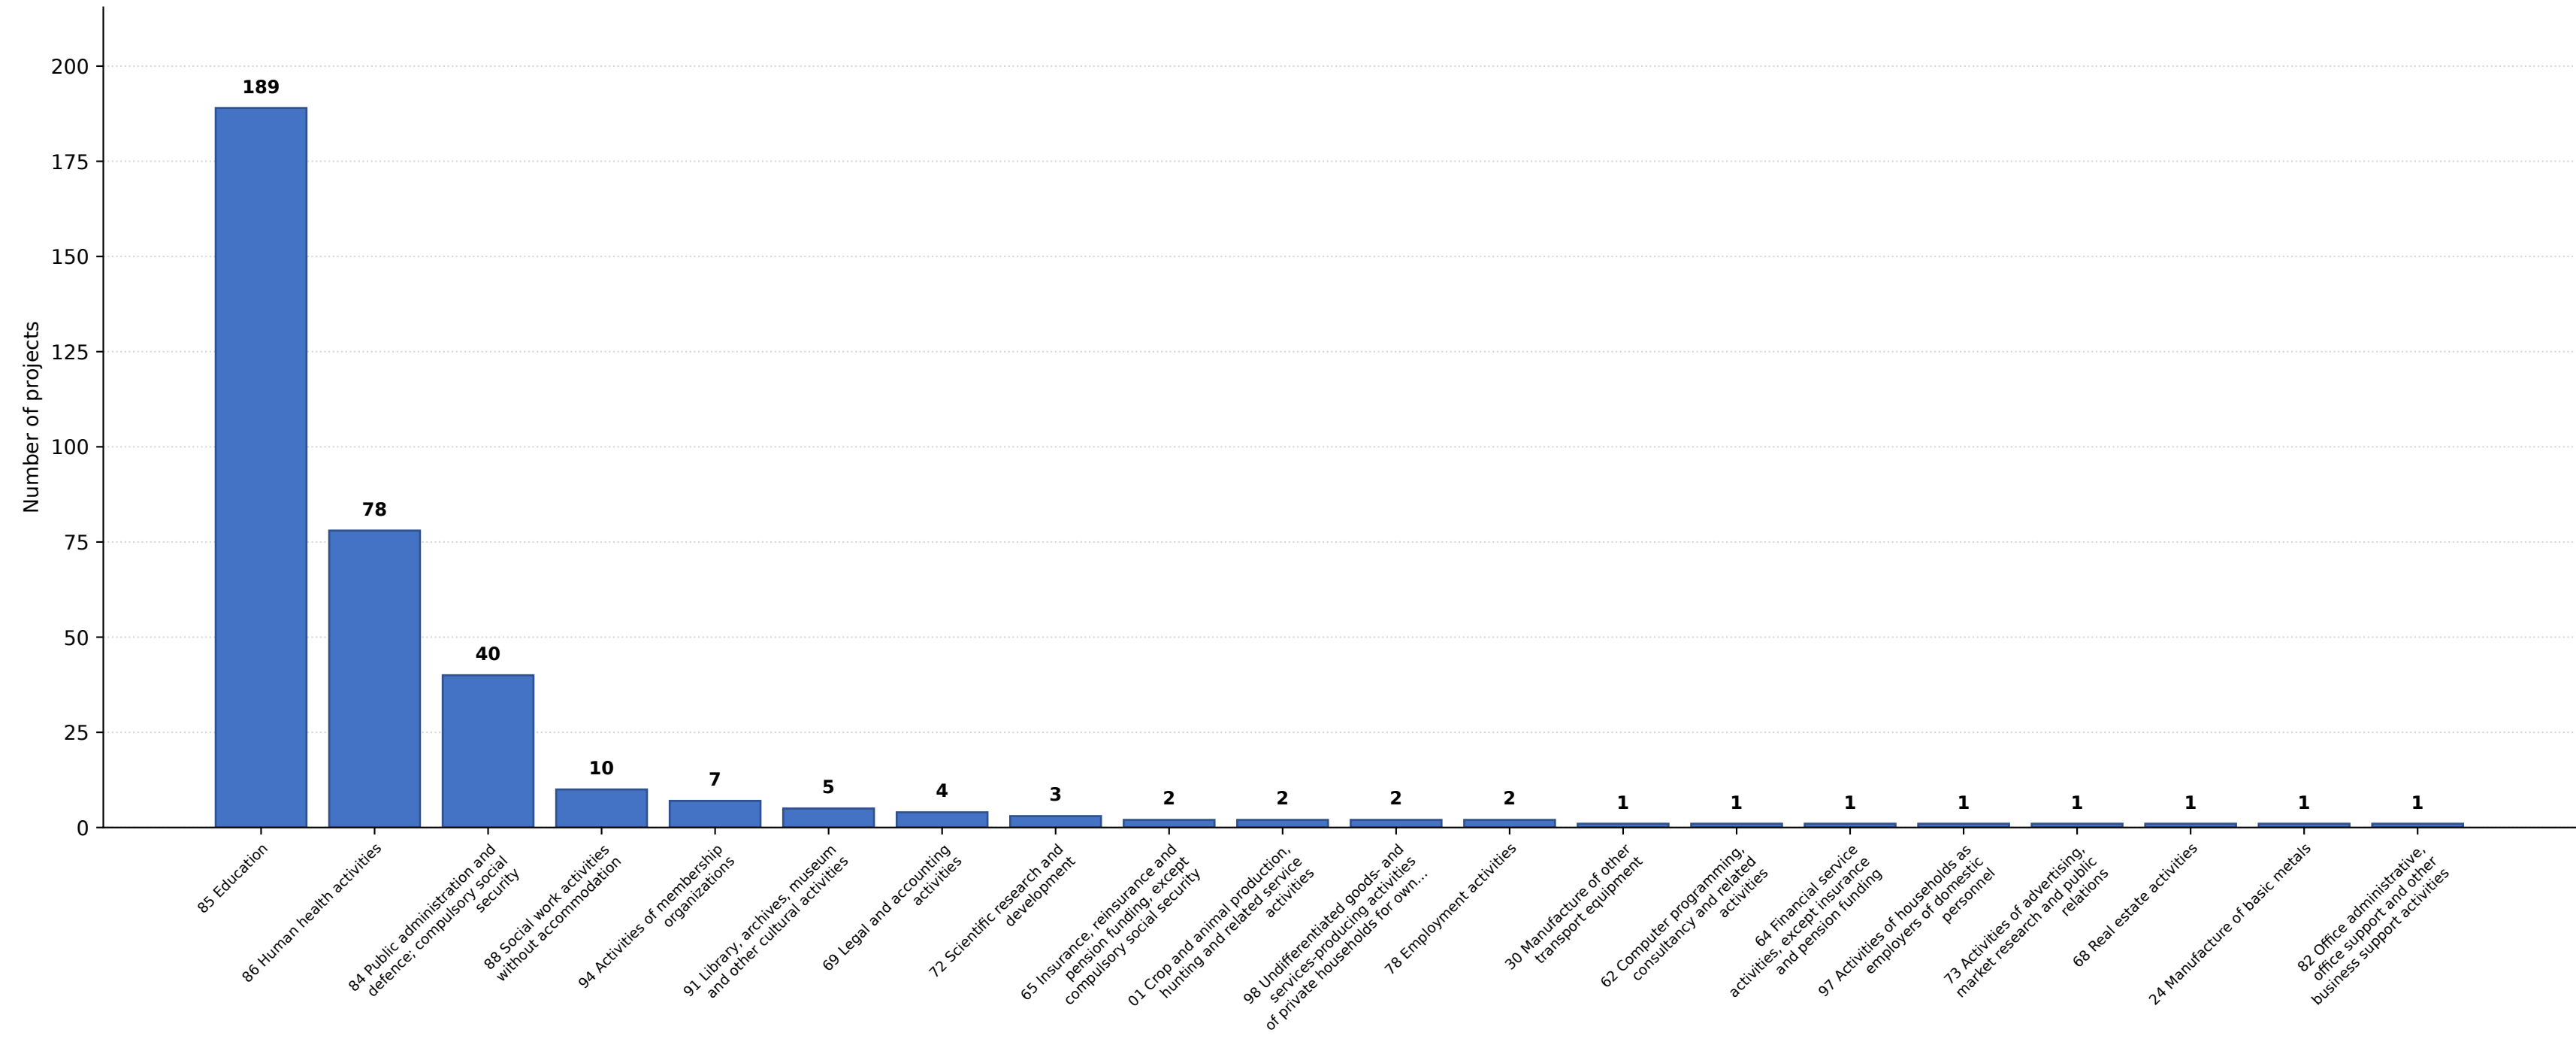

1. Repository: harvard-murray-archive - classes ranked by frequency (top 20)

Rank	Division	Full class name	Count	Share
1	85	Education	189	53.7%
2	86	Human health activities	78	22.2%
3	84	Public administration and defence; compulsory social security	40	11.4%
4	88	Social work activities without accommodation	10	2.8%
5	94	Activities of membership organizations	7	2.0%
6	91	Library, archives, museum and other cultural activities	5	1.4%
7	69	Legal and accounting activities	4	1.1%
8	72	Scientific research and development	3	0.9%
9	65	Insurance, reinsurance and pension funding, except compulsory social security	2	0.6%
10	01	Crop and animal production, hunting and related service activities	2	0.6%
11	98	Undifferentiated goods- and services-producing activities of private households for own use	2	0.6%
12	78	Employment activities	2	0.6%
13	30	Manufacture of other transport equipment	1	0.3%
14	62	Computer programming, consultancy and related activities	1	0.3%
15	64	Financial service activities, except insurance and pension funding	1	0.3%
16	97	Activities of households as employers of domestic personnel	1	0.3%
17	73	Activities of advertising, market research and public relations	1	0.3%
18	68	Real estate activities	1	0.3%
19	24	Manufacture of basic metals	1	0.3%
20	82	Office administrative, office support and other business support activities	1	0.3%

20 distinct classes over 352 classified projects (355 projects in scope). Showing the top 20.

2. Repository: ada

URL: <https://dataverse.ada.edu.au>

Project types found

- NOT_A_PROJECT: 1 (100.0% of 1)

Dominant class

- No project in this repository could be classified.

Coverage

- 0 of 0 in-scope projects (QDA_PROJECT + QD_PROJECT) received a class.
- 0 of 1 files could be downloaded; 0 yielded machine-readable text for the classifier to read.

Comments on the findings

- This repository could not be harvested in Part 1: its web application firewall rejected every automated request, so no project metadata and no files were ever acquired.
- The single record is the sentinel row the Part 1 pipeline writes to document that repository-level failure. It is not a research project, it carries an invented file name, and it is therefore typed NOT_A_PROJECT and excluded from classification rather than being allowed to contribute a spurious QD_PROJECT and a spurious class to the statistics.
- No distribution can be reported for this repository. This is a data acquisition limitation carried over from Part 1, not a classification result: the repository is browsable by a human but not machine-accessible.
